

1. (35 points) An open-loop transfer function is given by,

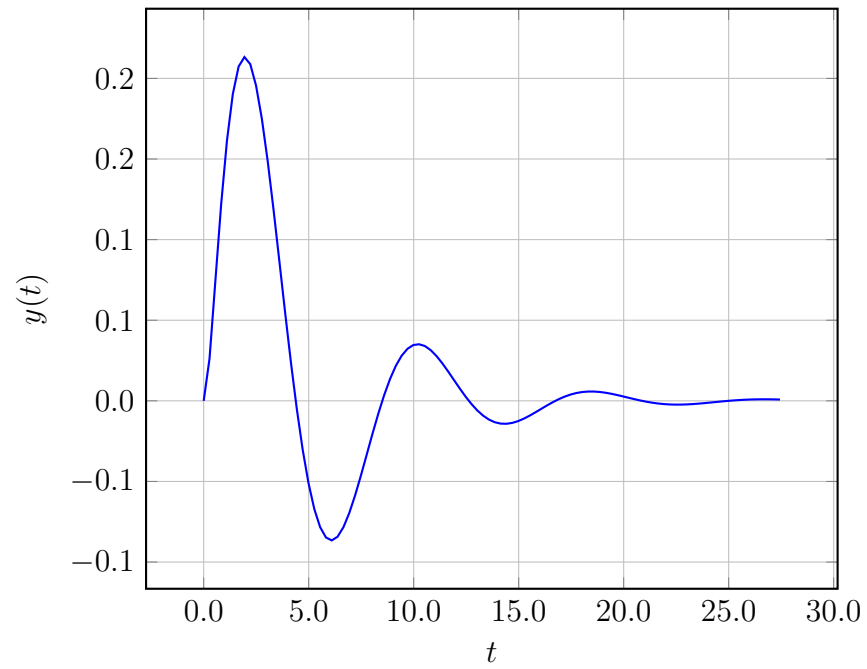

$$G(s) = \frac{1}{s^3 + 2.0s^2 + 3.29292s + 7.29292}$$

Which of the following PI controllers stabilizes the system in a unit-feedback closed-loop configuration?

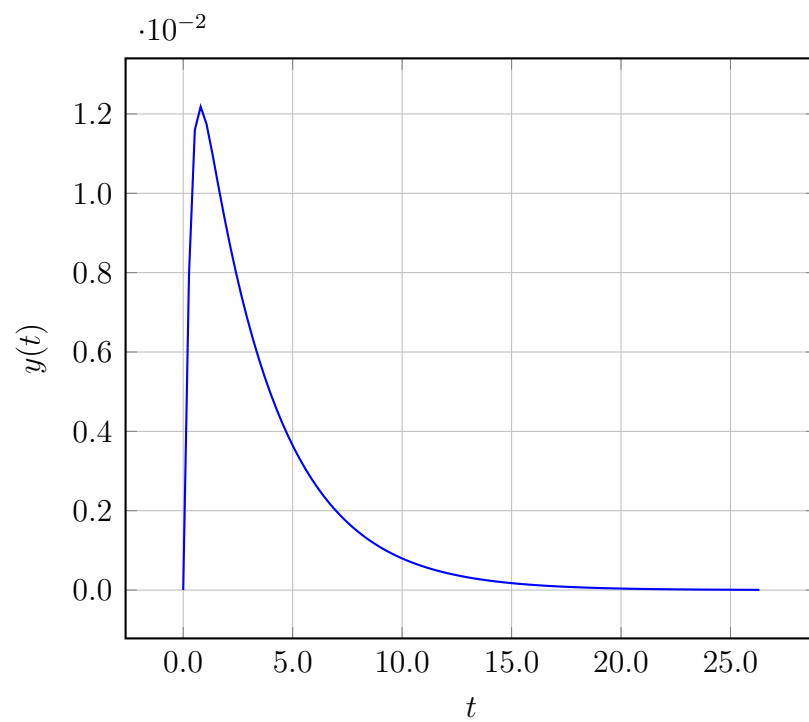

- A.  $F(s) = 1.6717 + \frac{3.08585}{s}$
- B.  $F(s) = -8.8283 + \frac{1.58585}{s}$
- C.  $F(s) = -8.24243 + \frac{3.08585}{s}$
- D.  $F(s) = -3.08585 + \frac{0.79292}{s}$**
- E.  $F(s) = 2.25757 + \frac{1.58585}{s}$

2. (35 points) Which one of the following unit impulse responses corresponds to a system that does not overshoot when subjected to a unit step input?

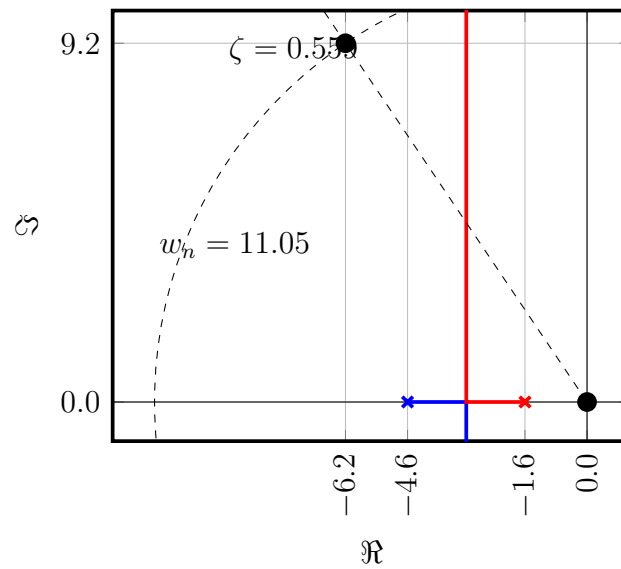

A.

B.

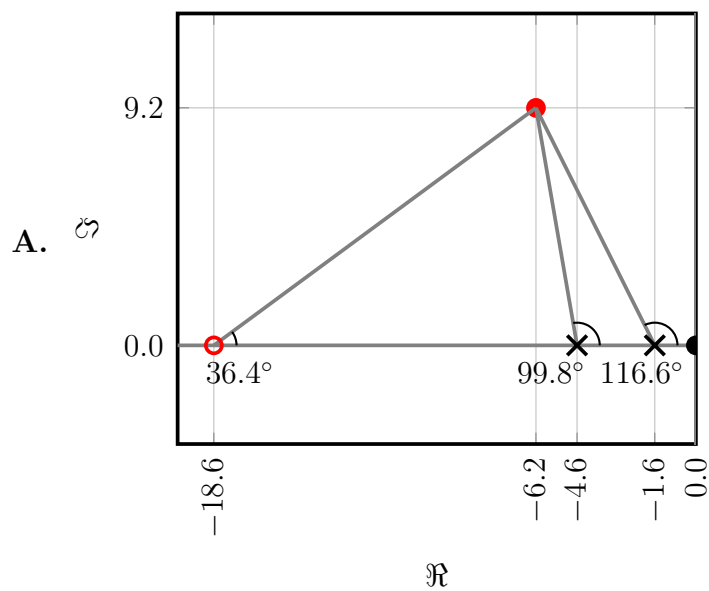

3. (30 points) A design point on the root-locus plot for a P-type controller is shown below.

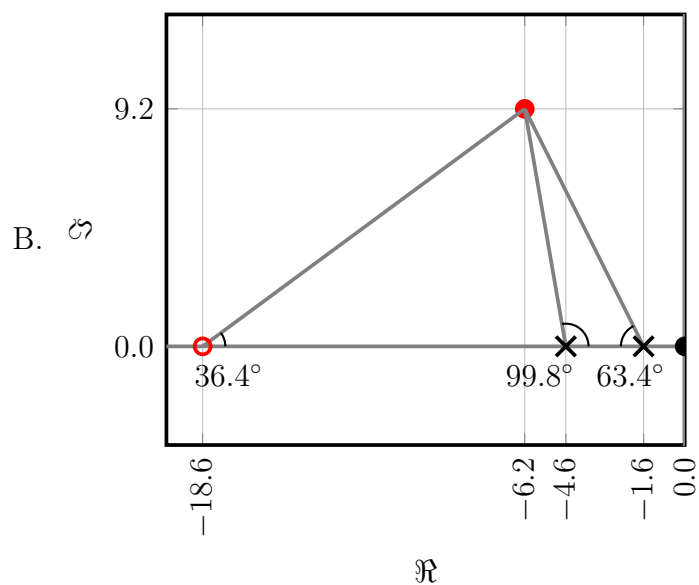

A zero is added so that the root-locus passes through this design point. Which of the following represents the correct angle condition for this design?

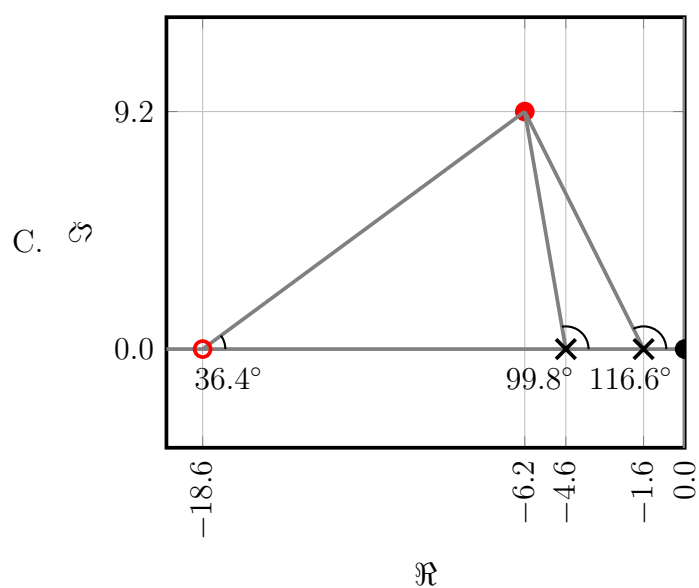

$$\sum \theta = 116.6^\circ + 99.8^\circ - 36.4^\circ = 180.0^\circ$$

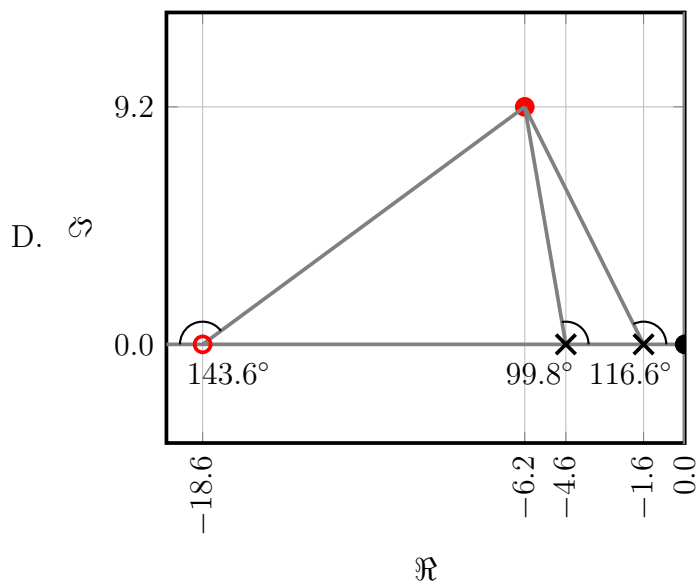

$$\sum \theta = 63.4^\circ + 99.8^\circ + 36.4^\circ = 199.6^\circ$$

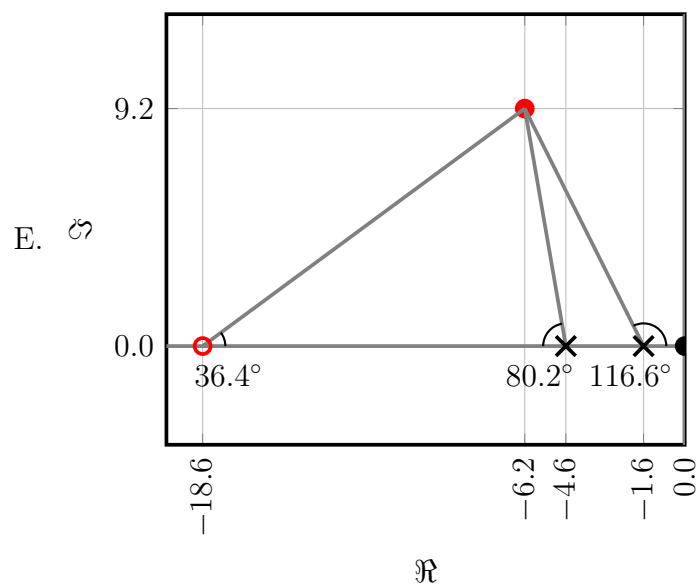

$$\sum \theta = 116.6^\circ + 99.8^\circ + 36.4^\circ = 252.8^\circ$$

$$\sum \theta = 116.6^{\circ} + 99.8^{\circ} + 143.6^{\circ} = 360.0^{\circ}$$

$$\sum \theta = 116.6^{\circ} + 80.2^{\circ} + 36.4^{\circ} = 233.2^{\circ}$$
