

1. (35 points) An open-loop transfer function is given by,

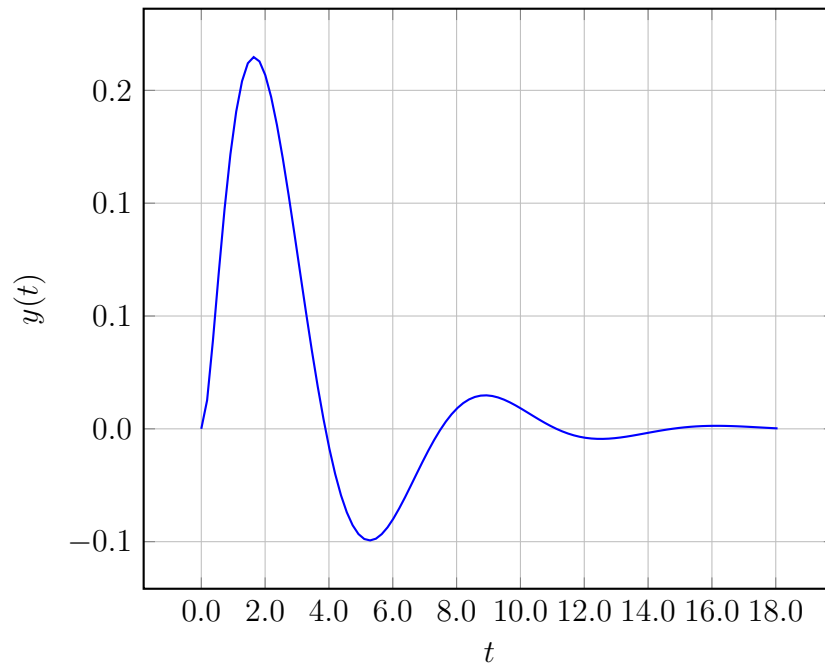

$$G(s) = \frac{1}{s^3 + 2.0s^2 + 3.42929s + 7.42929}$$

Which of the following PI controllers stabilizes the system in a unit-feedback closed-loop configuration?

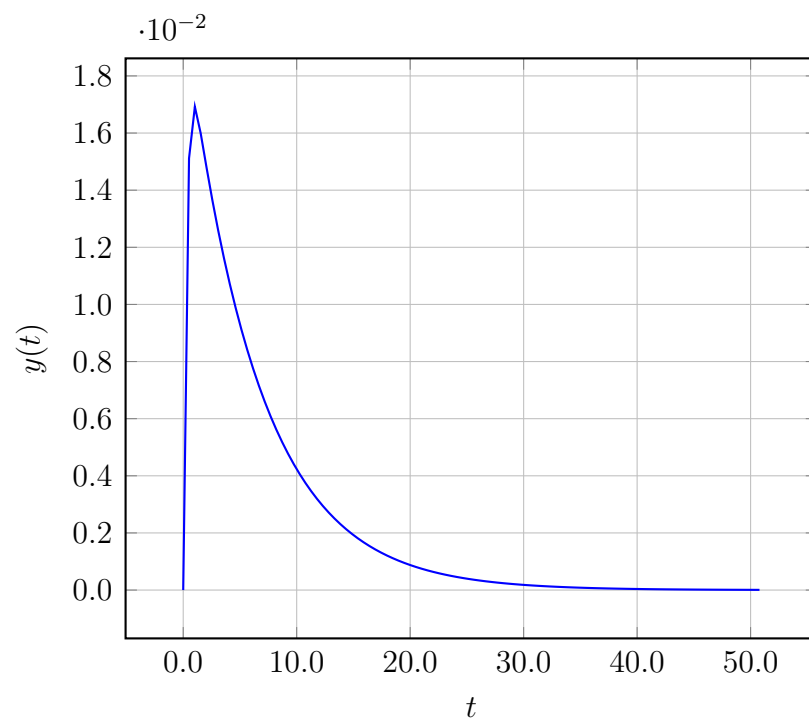

- A. $F(s) = 3.07574 + \frac{1.85858}{s}$
- B. $F(s) = -8.28284 + \frac{1.85858}{s}$
- C. $F(s) = -3.35858 + \frac{0.92929}{s}$
- D. $F(s) = 2.21716 + \frac{3.35858}{s}$
- E. $F(s) = -7.42426 + \frac{3.35858}{s}$

2. (35 points) Which one of the following unit impulse responses corresponds to a system that does not overshoot when subjected to a unit step input?

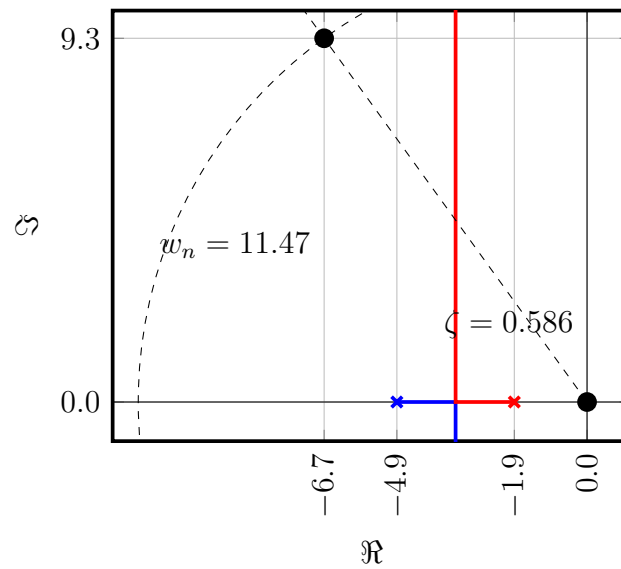

A.

B.

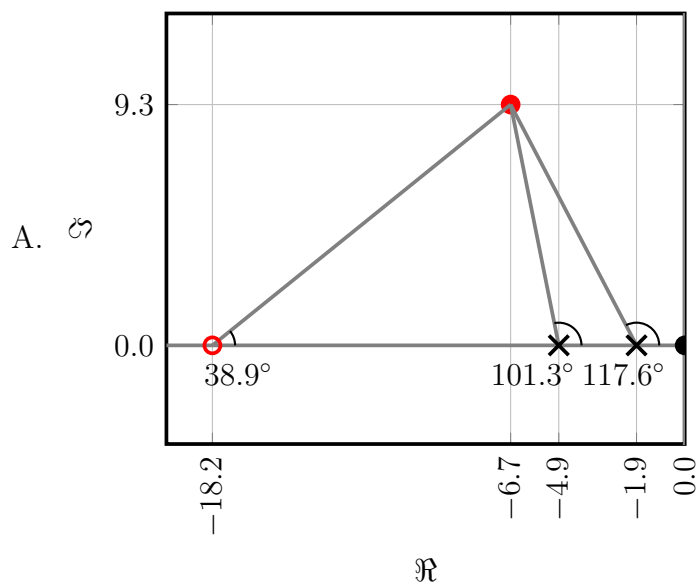

3. (30 points) A design point on the root-locus plot for a P-type controller is shown below.

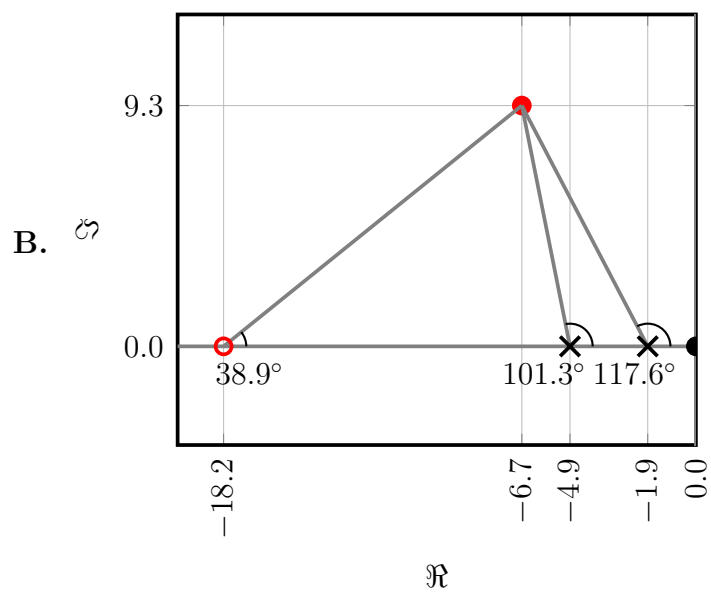

A zero is added so that the root-locus passes through this design point. Which of the following represents the correct angle condition for this design?

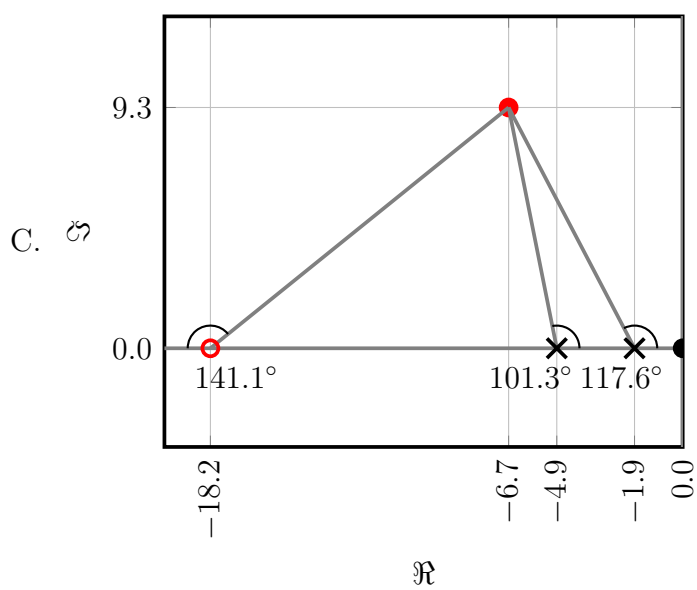

$$\sum \theta = 117.6^\circ + 101.3^\circ + 38.9^\circ = 257.8^\circ$$

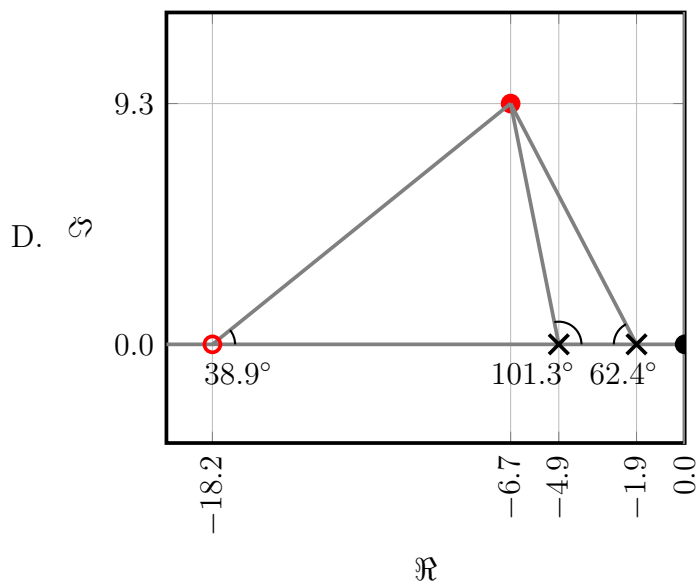

$$\sum \theta = 117.6^\circ + 101.3^\circ - 38.9^\circ = 180.0^\circ$$

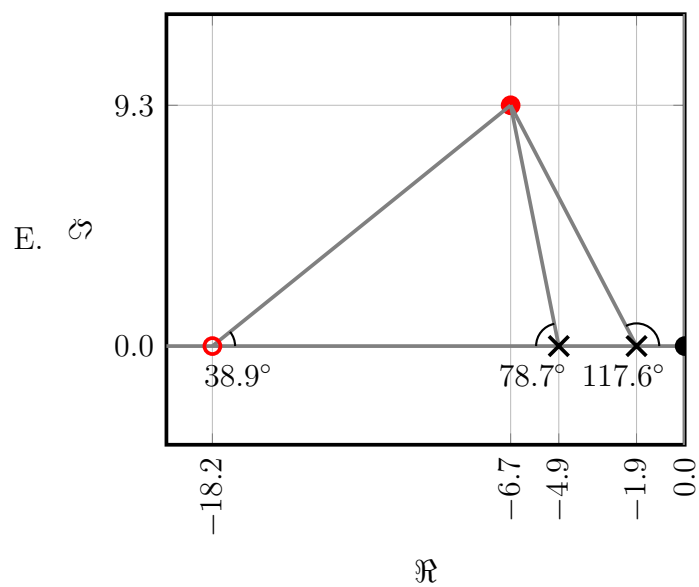

$$\sum \theta = 117.6^\circ + 101.3^\circ + 141.1^\circ = 360.0^\circ$$

$$\sum \theta = 62.4^\circ + 101.3^\circ + 38.9^\circ = 202.6^\circ$$

$$\sum \theta = 117.6^\circ + 78.7^\circ + 38.9^\circ = 235.2^\circ$$
