

1. (35 points) An open-loop transfer function is given by,

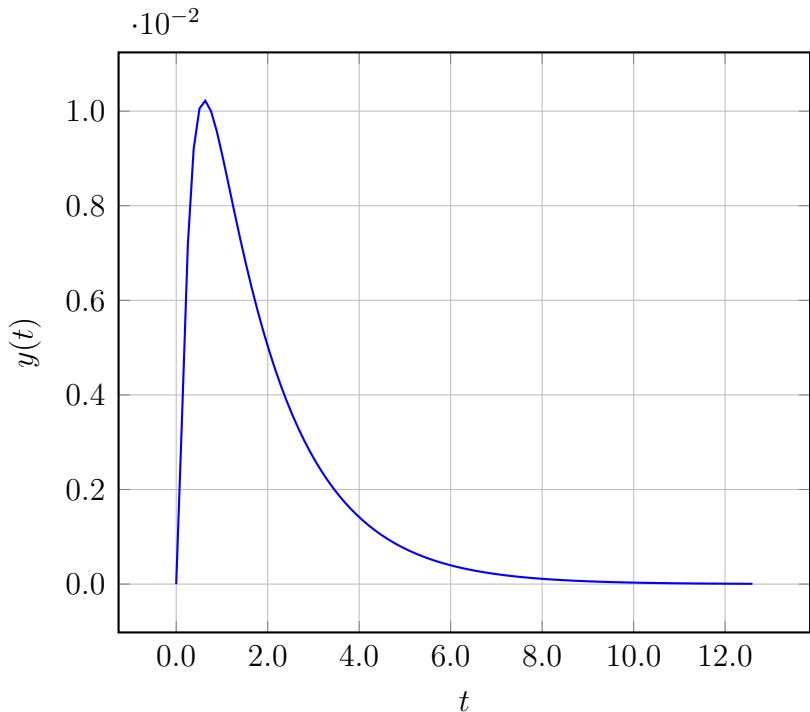

$$G(s) = \frac{1}{s^3 + 2.0s^2 + 3.11615s + 7.11615}$$

Which of the following PI controllers stabilizes the system in a unit-feedback closed-loop configuration?

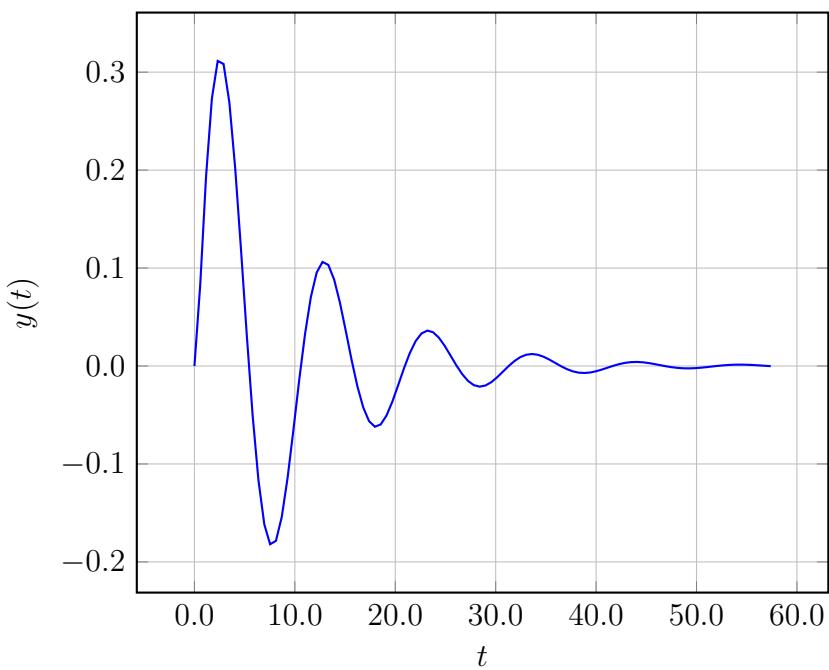

- A.  $F(s) = 0.96465 + \frac{2.73232}{s}$
- B.  $F(s) = 1.19696 + \frac{1.23232}{s}$
- C.  $F(s) = -2.73232 + \frac{0.61615}{s}$
- D.  $F(s) = -9.30304 + \frac{2.73232}{s}$
- E.  $F(s) = -9.53535 + \frac{1.23232}{s}$

2. (35 points) Which one of the following unit impulse responses corresponds to a system that does not overshoot when subjected to a unit step input?

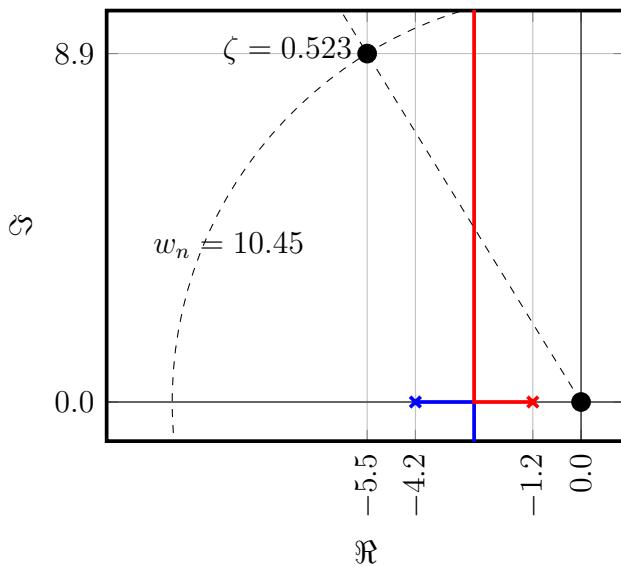

A.

B.

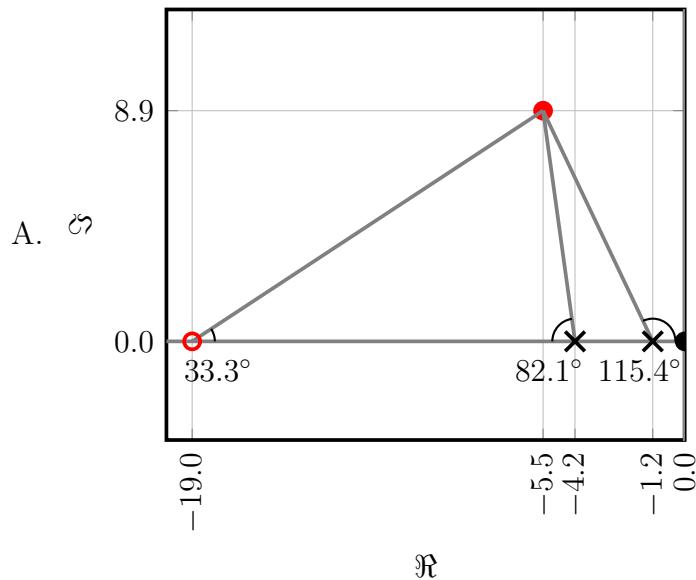

3. (30 points) A design point on the root-locus plot for a P-type controller is shown below.

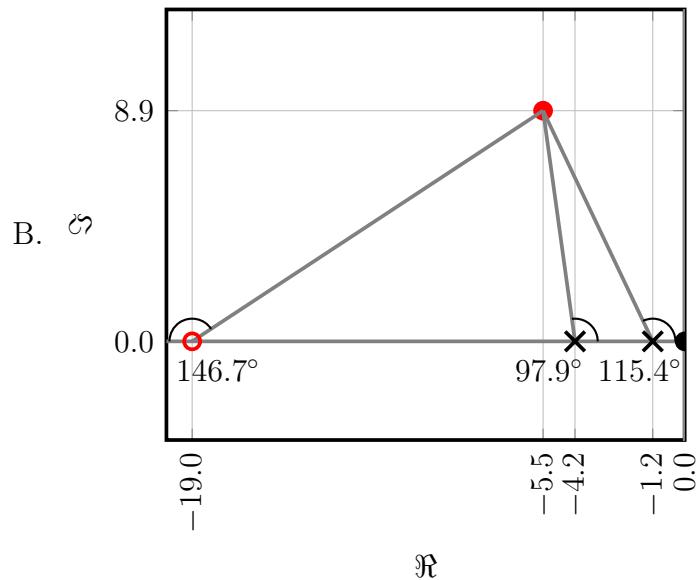

A zero is added so that the root-locus passes through this design point. Which of the following represents the correct angle condition for this design?

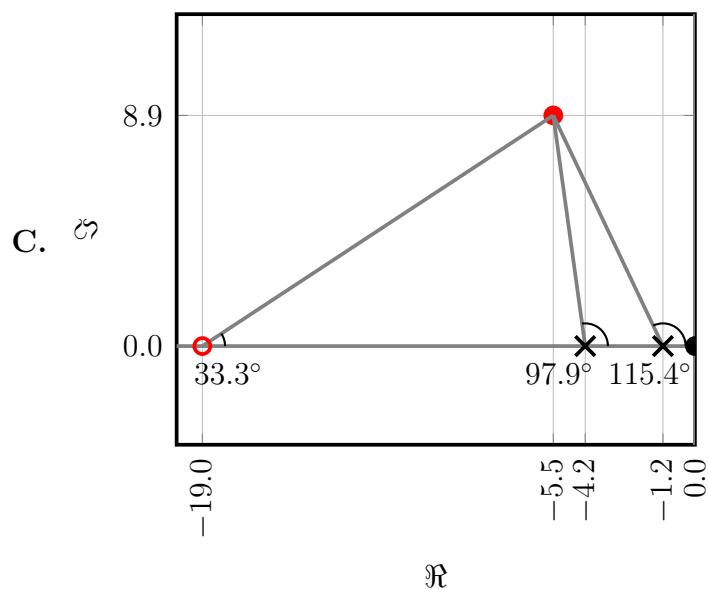

$$\sum \theta = 115.4^\circ + 82.1^\circ + 33.3^\circ = 230.9^\circ$$

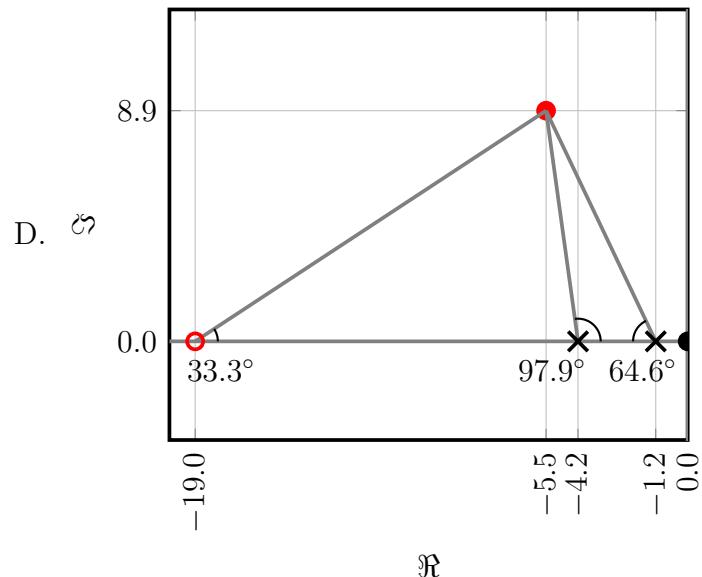

$$\sum \theta = 115.4^\circ + 97.9^\circ + 146.7^\circ = 360.0^\circ$$

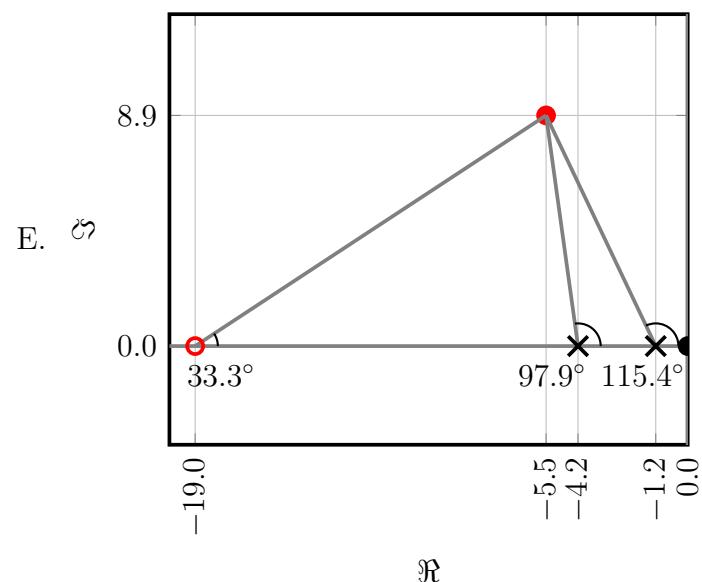

$$\sum \theta = 115.4^\circ + 97.9^\circ - 33.3^\circ = 180.0^\circ$$

$$\sum \theta = 64.6^\circ + 97.9^\circ + 33.3^\circ = 195.8^\circ$$

$$\sum \theta = 115.4^\circ + 97.9^\circ + 33.3^\circ = 246.6^\circ$$
