

1. (35 points) An open-loop transfer function is given as,

$$G(s) = \frac{1}{s^3 + 2.0s^2 + 3.05049s + 7.05049}$$

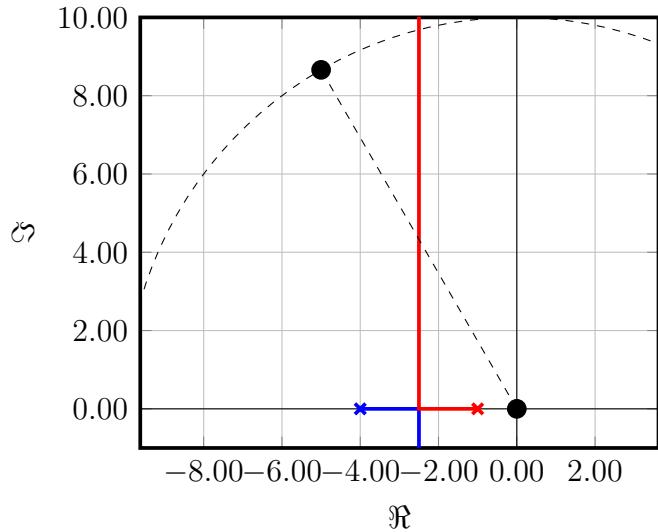

which of the following PI-controllers stabilizes the system in a closed-loop unit feedback structure?

- A.  $F(s) = 0.80302 + \frac{1.101}{s}$
- B.  $F(s) = -9.79799 + \frac{1.101}{s}$
- C.  $F(s) = -9.69698 + \frac{2.601}{s}$
- D.  $F(s) = 0.70201 + \frac{2.601}{s}$
- E.  $F(s) = -2.601 + \frac{0.55049}{s}$

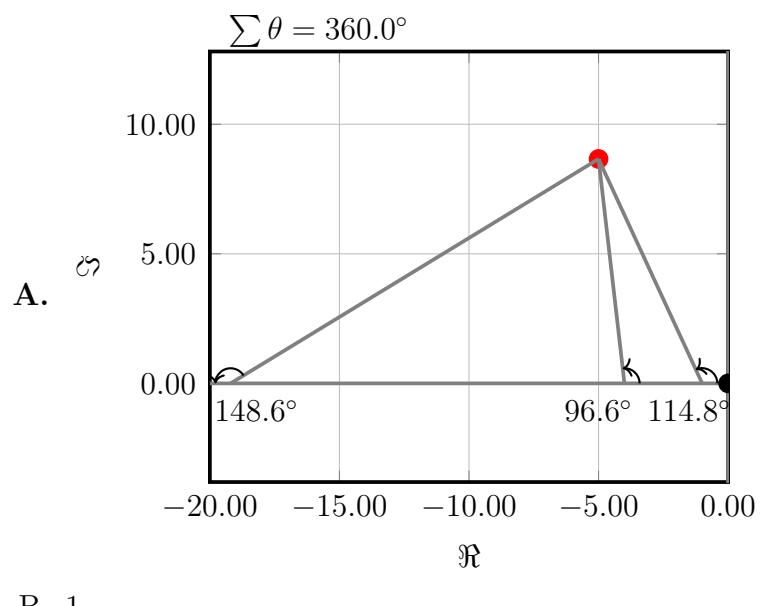

2. (35 points) Which of the following does not overshoot?

3. (30 points) Time-domain criteria is give as settling time  $t_s = 1 s$  and overshoot  $os = 10\%$ . The root-locus plot for the P-type controller design is depicted below.

Upgrading the controller to a PD-type controller which of the following angle conditions need to be used?

Q	A
1	E
2	A
3	A
